

GYG Senior SWE — Tek Sayfa Cheat Sheet

Yazdır / ikinci monitöre koy.

Loop (en olası Senior)

Recruiter → [OA?] → Live Spring Boot → System Design → 2–3 Behavioral

Recruiter'a sor: OA? Repo timing? AI policy?

Live coding (75 dk)

Dk	İş
0–3	Boot + smoke
3–18	Repro → root-cause → fix
18–28	Unit tests
28–45	Feature/endpoint
45–60	Refactor
60–75	Edge + observability + sorular

Fail pattern'ler: yanlış null check, testsiz bırakmak, debug'a gömülmek, refactor'u sadece konuşmak.

Katmanlar: entity · service · controller · exception handler

AI: boilerplate OK; root-cause senin.

System design (45 dk)

Prompt beklentisi: Ticket / booking / Ticketmaster-benzeri

1. FR: view · search · book
2. NFR: book = consistency; search = availability + low latency; hot event
3. Entities: Event, Venue, Ticket, Booking, User
4. API: GET event, GET search, POST reserve, POST confirm
5. Deep dive: hold TTL, locking, idempotency, search index, cache vs SoT

GYG dili: isBookable tek sahip · adapter Connectivity · explicit events · shadow + feature flag

Java / GC

Measure → reduce allocation → tune flags
-Xms=-Xmx , G1, MaxGCPauseMillis , -Xlog:gc*
Prod story hazırla.

Behavioral — 6 principles

1. Customer-first, not me-first
2. Curiosity as compass
3. Aim high & follow through
4. Navigate with agility
5. Growth over comfort
6. Build bridges, not islands

STAR + metrik + principle adı.

Engineering compass

Clarity over cleverness · Proven tech · SLOs · Done > perfect · Leave code better
